

CORE FOUNDATIONS
HOT TUB BASE
BEST VALUE, DRAINAGE, AND AESTHETIC

INSTALLATION GUIDE

01

Prepare site

Dig out ground 4 inches below surrounding surface. Place up to 2 inches of road base or other structurally sound material, level & compact down.

02

Place grid

Clip together Core Foundation panels to form a solid foundation surface. Ensure level, adjust as needed.

03

Fill with gravel

Use local clean gravel and fill until flush with top of Core Foundation panels. We recommend aggregate size of 5/8" or smaller. Lightly compact. Do Not Overfill

04

Enjoy!

Determine hot tub location and place.

Core Pro Tips

1/ Hide your electrical wiring by cutting a small groove into the top of grid (before gravel is installed).

2/ Place hot tub in center, then fill exposed grid with gravel ~1 cm above the surface for smooth, walkable surface around your hot tub.
