

RECREATIONAL INSTALL GUIDE

# CORE LANDSCAPE PRODUCTS

# STANDARD INSTALLATION GUIDE

---

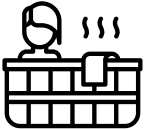

**1. Prep site:** Dig out the ground 3" below the surrounding surfaces. Place up to 2" of road base or other structurally sound material, level and compact down.

**2. Place Grid:** Clip together CORE Foundation panels to form a solid foundation surface. Ensure level, adjust as needed.

**3. Fill with Gravel:** Use local clean gravel and fill until flush on top of the foundation panels. We recommend the aggregate size of 5/8" or smaller. Lightly compact and **DO NOT OVERFILL**

**4. Enjoy:** Determine your location and place

**Pro tip:** Hide your electrical wiring by cutting a small groove into the top of the grid (before gravel is installed). Be sure to place your hot tub in the center, then fill the exposed grid with gravel ~1cm above the surface for a smooth, walkable surface.
